ABOUT ME

Software engineer on PageProof's small remote product team, taking features from design to production across web, desktop, and native hosts. I own the integrations platform: plugins for Canva, Microsoft Office, Adobe Creative Cloud, Final Cut Pro, and Jira, the OAuth 2.0 / OpenID Connect authorization server behind them, and the cross-platform Electron desktop app. I work in TypeScript, React, and Node.js daily and reach for Swift or C++ when the host platform demands it. **Languages:** Portuguese (native); English (full professional proficiency).

SKILLS

Languages: TypeScript, JavaScript, Node.js, Swift, C++

Frameworks & platforms: React, Electron, Vite, Adobe UXP, Canva Apps SDK, Office.js, Atlassian Forge

Infrastructure: OAuth 2.0 / OIDC, Kubernetes, Azure, Cloudflare Workers, Redis, GitHub Actions

WORK EXPERIENCE

Software Engineer

Mar. 2023 – Present

PageProof.com Limited

Remote

- Built and shipped production integrations for **Canva**, **Microsoft Office**, **Final Cut Pro**, and **QuarkXPress** as primary engineer; co-developed **Adobe UXP** plugins for Photoshop and InDesign and built the **Premiere Pro** review panel (timecode-ordered comments, playhead navigation, sequence export to proof) using React, TypeScript, Swift, C++, and platform SDKs.
- Shipped the **Jira** integration: proof-to-issue references, synced status comments and remote links, and approved-file attachment sync on a Node.js service with Redis-locked event orchestration; the **Atlassian Forge** app (issue panel, create proof from attachment) is in final testing.
- Designed and built the company-wide **OAuth 2.0** (RFC 6749) authorization server with **OpenID Connect** support (Node.js) that authenticates every plugin and the desktop app; now migrating it from Azure App Service to **Kubernetes**.
- Primary engineer on the cross-platform **Electron** desktop app; extracted a shared comments-panel package reused across the Adobe host apps and moved the Adobe plugin build to Bolt UXP (Vite).
- Extended the Office add-in with AI-assisted pre-proof checks (PowerPoint slide images, Word/Excel PDFs with grounded positions) and scoped intelligence agents per host app; building final-file delivery to **Google Drive**, **Dropbox**, and **OneDrive**.

Operations Research Analyst

Jan. 2022 – Sep. 2022

CTT – Correios de Portugal, S.A.

Lisbon, Portugal

- Led an operations research and data analytics project optimizing **last-mile delivery** across the postal distribution network.
- Modeled and solved a **vehicle routing problem (VRP)** under postal delivery constraints and built **Tableau** dashboards for operational planning.

PROJECTS

igcp-aforro | TypeScript library & CLI

- Deterministic, decimal-safe simulator for Portuguese **IGCP Aforro** Treasury Certificates (Séries B–F); **Zod**-validated inputs and golden tests against published IGCP rates.
- Published **npm** package with CLI, static **rates.json**, read-only HTTP API, and MCP server; CI automates Euribor/IGCP data refresh.

EDUCATION

NOVA University Lisbon

Sep. 2020 – Dec. 2022

Master of Science in Computer Science

Lisbon, Portugal

- *Coursework:* Artificial Intelligence, Concurrency and Parallelism, Information Retrieval, Machine Learning

Technische Universität Dresden

Apr. 2021 – Oct. 2021

Erasmus+ Programme Mobility in Computer Science

Dresden, Germany

NOVA University Lisbon

Sep. 2017 – Sep. 2020

Bachelor of Science in Computer Science

Lisbon, Portugal
